

1. Fix the steel screws to the threaded holes on rear of the number plate leaving pointed end facing outwards.
2. Using the number plate as a template, mark up exactly where the drill holes should be ensuring the number will be level once installed.
3. Drill holes in the marked places.
4. Fill the holes with mounting glue, cement or other suitable material.
5. Push fit the number plate into pre-prepared holes while filling material is still soft and allow to set in place. You may wish to use some tape to hold in place until fully set.
